Notes:

Evaluation Methods Used:

The accessibility assessment was comprised of the following steps:

I. A sighted accessibility expert conducted an overall technical analysis in order to identify issues of technical compliance that would affect mobility impaired, deaf/hearing impaired and low vision users. The evaluator inspected each screen using Google Chrome browser with the Wave and aXe toolbars. Code analysis was conducted using browser Developer Tools.

II. Keyboard accessibility analysis (for mobility and physically impaired users) was conducted by attempting to thoroughly navigate the Platform through the keyboard, without using a mouse, using Google Chrome browser.

III. For deaf and hard of hearing users, any audio content was assessed for proper captioning.

IV. The accessibility for low vision users was evaluated three ways: (1) using the screen magnification, palette, and contrast controls provided by the operating systems; (2) using the font resizing capability offered by the browser, and (3) using Color Contrast Analyzer version 2.2.

"Voluntary Product Accessibility Template" and "VPAT" are registered service marks of the Information Technology Industry Council (ITI)

V. An evaluator who is legally blind conducted the screen reader testing. The goal was to identify accessibility barriers that are likely to be experienced by users who are blind. The evaluator worked through the Web Pages using the JAWS and NVDA screen readers with Google Chrome.

VI. Any usability issues for users with disabilities encountered during the accessibility assessments in Steps I-V were noted for subsequent mention.
